2E2 Tutorial Sheet 12 Second Term¹

27 January 2006

Useful facts:

• Formula for exponentials with pure imaginary arguements

$$e^{i\theta} = \cos \theta + i \sin \theta$$

$$e^{-i\theta} = \cos \theta - i \sin \theta$$
(1)

• Formula for sine and cos

$$\cos \theta = \frac{e^{i\theta} + e^{-i\theta}}{2}$$

$$\sin \theta = \frac{e^{i\theta} - e^{-i\theta}}{2i}$$
(2)

Questions

1. (2) Find the general solutions for the system

$$\frac{dy_1}{dt} = -2y_1 + y_2 \tag{3}$$

$$\frac{dy_2}{dt} = y_1 - 2y_2 \tag{4}$$

$$\frac{dy_2}{dt} = y_1 - 2y_2 \tag{4}$$

Sketch the phase diagram and and describe the node.

2. (3) Find the solution of

$$\frac{dy_1}{dt} = -9y_2 \tag{5}$$

$$\frac{dy_2}{dt} = y_1 \tag{6}$$

$$\frac{dy_2}{dt} = y_1 \tag{6}$$

by considering $y_1(0) = r$ and $y_2(0) = 0$, draw the phase diagram.

3. (3) Find the solution of

$$\frac{dy_1}{dt} = y_1 - 3y_2 \tag{7}$$

$$\frac{dy_2}{dt} = 3y_1 + y_2 \tag{8}$$

$$\frac{dy_2}{dt} = 3y_1 + y_2 \tag{8}$$

for initial conditions $y_1(0) = r$ and $y_2(0) = 0$ write this in real form. Draw the phase diagram.
