## 2E2 Tutorial Sheet 1, Solutions<sup>1</sup>

## 16 October 2005

1. (1) Using the linearity of the Laplace transform, calculate the Laplace transform of

$$f(t) = 2 - \frac{t}{2} \tag{1}$$

Solution: So, split it up using linearity

$$\mathcal{L}\left(2 - \frac{t}{2}\right) = 2\mathcal{L}(1) - \frac{1}{2}\mathcal{L}(t)$$
$$= \frac{2}{s} - \frac{1}{2s^2}$$
(2)

2. (1) Using the linearity of the Laplace transform, calculate the Laplace transform of

$$f(t) = 2e^{2t} + 3t + 4e^{-4t} (3)$$

Solution: So, split it up using linearity

$$\mathcal{L}\left(2e^{2t} + 3t + 4e^{-4t}\right) = 2\mathcal{L}\left(e^{2t}\right) + 3\mathcal{L}(t) + 4\mathcal{L}\left(e^{-4t}\right)$$
$$= \frac{2}{s-2} + \frac{3}{s^2} + \frac{4}{s+4}$$
(4)

3. (2) The hyperbolic sine is defined as

$$\sinh x = \frac{e^x - e^{-x}}{2} \tag{5}$$

using the linearity of the Laplace transform, show that

$$\mathcal{L}(\sinh at) = \frac{a}{s^2 - a^2} \tag{6}$$

Solution: Well, just write it out

$$\mathcal{L}(\sinh(at)) = \mathcal{L}\left(\frac{e^{at} - e^{-at}}{2}\right) = \frac{1}{2}\mathcal{L}(e^{at}) - \frac{1}{2}\mathcal{L}(e^{-at})$$

$$= \frac{1}{2}\frac{1}{s-a} - \frac{1}{2}\frac{1}{s+a}$$

$$= \frac{1}{2}\frac{s+a-(s-a)}{s^2-a^2} = \frac{a}{s^2-a^2}$$
(7)

$$f(t) = e^{2t}t^2$$

Solution: Recall the first shift theorem says

$$\mathcal{L}\left(e^{-at}f(t)\right) = F(s-a) \tag{8}$$

where  $\mathcal{L}(f) = F(s)$ . Now, we know that

$$\mathcal{L}(t^2) = \frac{2!}{s^3} = \frac{2}{s^3} \tag{9}$$

so, by the shift theorem

$$\mathcal{L}\left(e^{2t}t^{2}\right) = \frac{2}{(s-2)^{3}}\tag{10}$$

5. (2) Using the formula for the Laplace transform of the differential find  $\mathcal{L}(f')$  where  $f=t^2$ , check your answer by differentiating f directly and then working out its Laplace transform.

Solution: Well

$$\mathcal{L}(f) = \mathcal{L}(t^2) = \frac{2}{s^3} \tag{11}$$

and f(0) = 0 so

$$\mathcal{L}(f') = s\mathcal{L}(f) - f(0) = \frac{2}{r^2}$$
(12)

Doing it by differenciating first, we have f'=2t so

$$\mathcal{L}(f') = \mathcal{L}(2t) = \frac{2}{s^2} \tag{13}$$

As expected, this is same answer.
